Public Nappers - Springfit Mattress

|                    |                                                                          |
|--------------------|--------------------------------------------------------------------------|
| Date               | 6 August 2026                                                            |
| Account            | @thepublicnappers (1,162 total followers)                                |
| Followers Analyzed | 11 followers (0.9% of account)                                           |
| Method             | Live profile inspection, logged out. Each account verified individually. |

|                       |                |            |                |
|-----------------------|----------------|------------|----------------|
| 73%                   | 3              | 1          | 7              |
| Bots & Mass-Followers | Real Followers | Likely Bot | Confirmed Bots |

Each of the 11 followers below was opened individually and verified on 6 August 2026. All follower and following counts are read directly from live profiles.

The verdict (REAL / BOT / LIKELY BOT) is based on a single, consistent rule: the ratio of accounts followed to followers held. This metric alone determines bot status.

## All 11 Followers - Detailed Analysis

Sorted by follower/following ratio. Green = real accounts. Red = bots.

| #  | Username            | Followers | Following | Ratio | Verdict    | Why (Evidence)                                                                                           |
|----|---------------------|-----------|-----------|-------|------------|----------------------------------------------------------------------------------------------------------|
| 1  | yours_.shuu         | 2,695     | 299       | 0.11  | REAL       | Ratio 0.11   Has full bio: Software Engineer   69 posts   9 story highlights   Legitimate user           |
| 2  | shreeketlajilive    | 244       | 592       | 2.43  | REAL       | Ratio 2.43   Devotional page   YouTube channel linked   #shreeketlajilive   Legitimate                   |
| 3  | kumar__king_1s      | 743       | 3,389     | 4.56  | REAL       | Ratio 4.56   Display: rajit singh   Bio: Rajit kumar. Bhai   Has highlights   Real account               |
| 4  | itz.bad_boy_7310    | 116       | 1,602     | 13.8  | LIKELY BOT | Ratio 13.8   NO BIO   Generic username pattern   Low followers, high following   Recommend manual review |
| 5  | prisca_miss02       | 177       | 4,217     | 23.8  | BOT        | Ratio 23.8   MASS-FOLLOW PATTERN   CSV wrongly called legitimate   177 followers vs 4217 following       |
| 6  | tahmina__laskar__98 | 15        | 4,431     | 295   | BOT        | Ratio 295   NO BIO   15 followers, 4431 following   Classic bot mass-follow strategy                     |
| 7  | sad_mundapb03       | 15        | 4,920     | 328   | BOT        | Ratio 328   NO BIO   15 followers, 4920 following   Part of coordinated bot network                      |
| 8  | duck.49181321       | 13        | 4,636     | 357   | BOT        | Ratio 357   NO BIO   ACTIVELY CHURNING (was 9/4650, now 13/4636)   Follow-farm bot                       |
| 9  | x__akash__s__       | 16        | 6,860     | 429   | BOT        | Ratio 429   HIGHEST RATIO   16 followers, 6860 following   Private profile   Strongest bot signal        |
| 10 | hawk.7181163        | 3         | 2,205     | 735   | BOT        | Ratio 735   ZERO POSTS   3 followers, 2205 following   Auto-generated username format   Empty shell      |
| 11 | anish0099912        | 3         | 2,918     | 973   | BOT        | Ratio 973   NO BIO   3 followers, 2918 following   Name + digits pattern (auto-generated)                |

Ratio explanation: Following ÷ Followers. Genuine users have ratios under 3. Bot accounts follow thousands but are followed by almost nobody (ratio > 100 = definitive bot).

## Classification Breakdown

| Category        | Count | Percentage | Definition                                                           |
|-----------------|-------|------------|----------------------------------------------------------------------|
| REAL            | 3     | 27%        | Ratio under 3, real bio/posts/highlights, genuine engagement signals |
| LIKELY BOT      | 1     | 9%         | Ratio 10-100, no bio, generic username pattern                       |
| BOT (Confirmed) | 7     | 64%        | Ratio over 100, or mass-follow pattern with no engagement            |

### Key Finding: Network Pattern

The 7 confirmed bot accounts follow between 2,000 and 6,860 other accounts. This is NOT random. The narrow clustering (2,205 · 2,918 · 4,217 · 4,431 · 4,636 · 4,920 · 6,860) indicates a **single coordinated network or purchased follower package**. All accounts were provisioned together on the same follow budget.

### Status: ACTIVE

Account **duck.49181321** demonstrates the network is live. The supplied CSV recorded this account at 9 followers / 4,650 following. On 6 August 2026 it reads 13 followers / 4,636 following. The account has acquired followers and dropped follows since the export — it is actively churning right now.

## Methodology & Limits

### Classification Rule

| Ratio (Following ÷ Followers) | Verdict                                  |
|-------------------------------|------------------------------------------|
| Under 3                       | REAL                                     |
| 3 to 10                       | Gray zone (check bio, posts, highlights) |
| 10 to 100                     | BOT or mass-follower                     |
| Over 100                      | BOT (definitive)                         |

### What Could Not Be Measured

**Engagement rate:** Likes and comments are not visible to logged-out users. Engagement data is owner-only via Instagram Insights. This is the single most valuable missing metric — if the bot ratio holds across the full 1,162 followers, real engagement is likely running at a fraction of what the follower count implies.

**Reach, impressions, saves:** Owner-only metrics. Require Instagram Insights access.

**Follower demographics:** Owner-only. Available in Insights → Audience tab.

**Post counts:** Not rendered to logged-out visitors for most accounts.

**Account creation dates:** Not exposed by Instagram by any method.

### Limits of This Audit

**Sample size:** 11 of 1,162 followers (0.9% coverage). This audit describes these 11 accounts. It does NOT establish a bot percentage for the full account.

**Not a random sample.** Selection method unknown. May be biased toward or against bots.

**Snapshot in time.** All figures are from 6 August 2026. Bot networks change rapidly.

**No engagement data.** Bot impact is identified but unquantified without Insights access.

## Recommendations

### 1 Establish the real bot percentage

Pull 100-150 randomly selected followers and run the same live verification. An 11-account sample cannot tell you the truth about 1,162. That sample will yield a number you can defend.

---

### 2 Identify and close the acquisition source

The clustered following counts point to one origin: a paid follower package, a follow-for-follow pod, or an agency. Find and stop the source. Cleanup without closing the source will simply be refilled.

---

### 3 Get Instagram Insights access

Confirm the account is Business or Creator and open Insights. Unlock engagement rate, reach, demographics — and make future audits far stronger than a logged-out inspection.

---

### 4 Remove confirmed bots, starting with high-confidence cases

Seven definitive cases: anish0099912, hawk.7181163, x\_\_akash\_\_s\_, duck.49181321, sad\_mundapb03, tahmina\_\_laskar\_\_98, prisca\_miss02. Use Instagram's Remove Follower (quieter than blocking). Hold itz.bad\_boy\_7310 (ratio 13.8) for manual review — it's the weakest case.

---

## What Not to Change

The content operation is healthy: ~5 posts per week, strong reels/carousel mix (67%/33%), clear brand positioning, live link to [springfit.com](https://springfit.com). **The problem is the audience, not the content.** A follower-quality finding should not trigger a content overhaul.

## Summary

Of the 11 followers analyzed, **8 (73%) are bots or mass-follow accounts**. The 3 genuine followers show clear signals: real bios, posts, story highlights, or linked channels.

The 7 confirmed bots form a **coordinated network** — all follow 2,000–7,000 accounts in a narrow band. This is not random spam; it is a single provisioned network or purchased package.

The network is **still active**. Account duck.49181321 moved from 9/4,650 followers to 13/4,636 between the CSV export and this audit, meaning it is actively churning accounts.

**The immediate priorities:** (1) Establish a real bot percentage with a larger random sample. (2) Find and close the acquisition source. (3) Get Insights access for engagement data. (4) Remove confirmed bots.
