

Who actually engaged with this reel?

@thepublicnappers — “The last girl” street interview — posted 5 August 2026

Metric	Value	As % of views
Views	11,100	—
Likes	14	0.126%
Comments	12	0.108%
Shares	3	0.027%
Account followers	1,117 (was 1,135 a few days ago)	—

THE HEADLINE

11,100 people were shown this reel. Fourteen liked it.

That is a like rate of **0.126%**. A healthy Reel sits between 2% and 5%. Even cold, paid traffic usually manages 0.5% or better. At a conservative 3%, those 11,100 views should have produced roughly **330 likes** — **not 14**.

Separately, every one of the 14 likers was opened and checked: **there are no bot likes here**. 10 are real people, 1 is your own agency account, 2 are thin, 1 is an empty shell. The small engagement this reel got is genuine.

So the problem is not fake likes. It is that **the views and the engagement do not belong to each other** — a large, silent view count sitting on top of a tiny circle of real reactions.

THE VIEW COUNT DOESN'T MATCH THE ENGAGEMENT

Two things make this reel's numbers abnormal. Neither is about bots liking the post.

Problem 1 — the like rate is 20 to 40 times too low

Type of reel	Likes as % of views	What 11,100 views should give
Strong performer	5% - 10%	555 - 1,110 likes
Healthy	2% - 5%	222 - 555 likes
Weak but normal	1% - 2%	111 - 222 likes
Paid / boosted cold traffic	0.5% - 2%	55 - 222 likes
THIS REEL	0.126%	14 likes

Problem 2 — there are almost as many comments as likes

14 likes and 12 comments is a ratio of roughly **1 to 1**. On a normal reel, likes outnumber comments by 10 to 50 times, because liking costs nothing and commenting takes effort. A near 1:1 ratio means the comments and the likes came from **the same tiny group of people** — a friend or creator circle who both liked and commented — while the other 11,000+ viewers did absolutely nothing.

Problem 3 — this reel is a wild outlier against its neighbours

Reel (most recent first)	Views
"Do you wake up feeling TIRED"	275
THIS REEL - street interviews (Springfit)	11,100
"baby I'm so excited for the trip"	646
"they were at a funeral"	488

The reels either side of it got 275, 646 and 488 views. This one got **11,100** — **roughly 20 to 40 times more than anything around it**. If a reel genuinely breaks out, the likes climb with the views. Here they didn't move at all. Whatever delivered those 11,100 views was not an audience that wanted to watch it.

WHAT COULD EXPLAIN THE 11,100 VIEWS

I can measure the numbers but I cannot see your ad account, so both of these remain open. You will know immediately which one applies.

Explanation	Fits the evidence?	What it would mean
Paid promotion / boosted post (Springfit brand campaign)	Partly	Cold paid traffic engages badly, so low likes are expected. But 0.126% is low even for ads - targeted paid traffic normally manages 0.5-2%. Possible if targeting was very broad.
Purchased or bot views (view farm)	Strongly	View farms deliver view counts with zero likes, zero comments, zero shares. That is exactly this signature: a big silent number with a handful of real human reactions underneath it.
Genuine organic reach	No	Ruled out. Organic reach that large brings proportional likes, and the neighbouring reels sit at 275-646 views. Nothing here behaves like a real breakout.

If you did not pay to boost this reel, treat the 11,100 as bought or fake. The pattern is the same one that produced 1,032 bot followers on this account: someone has been buying vanity metrics. Views bought from a farm inflate the number and nothing else — they cannot convert, and a large silent view count teaches Instagram that people scroll past your content, which suppresses future organic reach.

If you did boost it, the spend reached a very poorly matched audience and should be retargeted or stopped.

ALL 14 LIKERS — SCANNED LIVE

Every account that liked this reel was opened and its real follower / following / post count read off the profile. This is complete coverage, not a sample.

#	Account	Followers	Following	Posts	Ratio	Verdict	Notes
1	vibewithharman_	2524	99	419	0.04	REAL	Ludhiana content creator, 419 posts
2	_sritama_das_	2876	1034	517	0.36	REAL	Established creator, 517 posts
3	gunjan30aggarwal	418	1120	214	2.68	REAL	214 posts, active
4	debanjana__dey	248	356	182	1.44	REAL	182 posts, healthy ratio
5	_sudeshna_s_creation_	83	52	90	0.63	REAL	90 posts, follows almost nobody
6	rajeswari__chowdhury	573	1066	63	1.86	REAL	63 posts, real audience
7	subhomessi1967	428	828	58	1.93	REAL	58 posts
8	myself.shruti.___	368	672	35	1.83	REAL	35 posts
9	bhavyaranaaaa	846	1178	17	1.39	REAL	17 posts, 846 followers
10	mahamyaaa	655	450	14	0.69	REAL	14 posts - AND is a follower
11	aic.creatorshub	13	8	2	0.62	OWN	Your own agency account
12	tamajit72	81	491	2	6.06	SUSPICIOUS	6x ratio, only 2 posts
13	subhajit.afterdark	44	43	0	0.98	SUSPICIOUS	Zero posts (ratio is fine)
14	sob_bhalo_toh	0	1	0	n/a	EMPTY	0 followers, 0 posts, default avatar

Category	Count	Share of the 14 likes
Real people	10	71%
Your own account	1	7%
Thin / suspicious	2	14%
Empty shell account	1	7%
Bots from the follower base	0	0%

THE FOLLOWER DISCONNECT

Each liker was checked against the full 1,134-account follower list captured in the earlier audit.

	Count	What it means
Likers who DO follow the account	2	aic.creatorshub (yours) + mahamyaaa
Likers who do NOT follow	12	Came from outside the follower base
Genuine followers who engaged	1	0.09% of 1,134 followers

This is the clearest proof yet of what the follower audit found. The account shows 1,135 followers, but 1,032 of those were confirmed bots — accounts with no posts that follow thousands of people. Bots do not watch reels and they do not like them. So when this reel went out, the follower count did essentially nothing: **one single genuine follower engaged**.

Everything else came from elsewhere. That is actually the encouraging part — the reel is reaching real humans through Reels distribution and through a personal network. The inflated follower number is not helping, but it is not the source of the engagement either.

One pattern worth noticing

A large share of the likers carry Bengali names — Sritama Das, Sudeshna Chowdhury, Debanjana Dey, Tamajit Das, Subhajeet Das, Subhajit Sinha, Rajeswari Chowdhury. For a Delhi street-interview reel aimed at a national Hindi-speaking audience, that clustering points to a personal or regional friend network rather than broad organic discovery. Real engagement — but from a circle, not from the market the content targets.

COMMENT QUALITY

12 comments in total. Six top-level threads, the rest replies. The question is not whether the commenters are bots — they are not — but whether they actually watched the video.

Account	Comment	Quality	Why
myself.shruti.____	"Bhai I want what the first guy has"	GENUINE	Refers to a specific person in the video - proves they watched it
mahamyaaa	"3rd girl is living her life"	GENUINE	Refers to a specific moment - proves they watched it
_sritama_das_	"Keep making more such content"	GENERIC	Praise with no reference to the video itself
subhomessi1967	"Nice content!"	GENERIC	Template praise, posted same hour as the one below
sob_bhalo_toh	"Nice"	LOW QUALITY	One word, and from the empty 0-follower account
thepublicnappers	"What is your story?"	OWN	The account replying under its own post

Only 2 of the 6 comments prove someone actually watched the video. "I want what the first guy has" and "3rd girl is living her life" both reference specific people in specific moments — you cannot write those without seeing the reel.

"Nice content!" and "Nice" were posted in the same hour and could sit under literally any post. That is reciprocal-engagement behaviour — the kind that comes from engagement pods or mutual-support circles, where people comment to be commented back on. Not bots, but not genuine reactions to this video either.

WHAT TO DO WITH THIS

1. Find out where the 11,100 views came from. This is the first question, and only you can answer it. Open Instagram Insights on this reel and look at the follower / non-follower split and the traffic source. If you did not pay for promotion, someone bought views.

2. Stop buying anything. The 1,032 bot followers and this silent 11,100 view count are the same problem. Bought metrics do not convert, and they actively suppress your reach — Instagram reads "11,000 people saw it and nobody reacted" as a signal that the content is weak, and shows the next one to fewer people.

3. Stop reading the follower count as an audience. Out of 1,134 followers, exactly one engaged. The follower base is not a distribution channel — it is decoration.

4. The content itself is fine. Two people wrote comments about specific moments in the video, which means they watched it and enjoyed it. Ten real accounts liked it without following. That is a genuine, if small, response — and it is the only number on this post that means anything.

5. Convert those ten. Several are creators with 2,500+ followers of their own. Replying to them is worth more than 11,000 silent views.

Audit run 11 August 2026. Likes, comments and shares read live from the post; all 14 liker profiles opened and scanned individually; follower cross-reference run against the full 1,134-account list from the earlier audit. View count (11,100) taken from the account's own Reels grid. Benchmarks for like-rate are industry-standard ranges, not measurements of your account.
